ON THE SOLUTION OF THE FOKKER-PLANCK-EQUATION FOR MULTI-DIMENSIONAL NONLINEAR MECHANICAL SYSTEMS

Shaker Verlag Feb 2014, 2014. Buch. Condition: Neu. Neuware - Dynamical physical systems are commonly described by means of mathematical analysis of the underlying system state variables. While a lot of technical applications are sufficiently well described by deterministic differential equations, there are situations where the response of a dynamic system under the influence of random excitations is of specific interest. The modeling of such systems leads to the analysis of stochastic processes, the trajectories of which can be found...
