Forgotten Books, 2016. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from Annual Report of the Director of the Mount Wilson Solar Observatory: Extracted From Year Book No. 16, for the Year 1917, Pp. 199 to 235 The observations of greater weight, those upon low-level lines of intensity 00 to 1, indicate a slight upward movement of the vapor over the center of the disk. A possible explanation from the relativity point of View is that the displacement toward the red has been over balanced by a Doppler effect; but at the limb, where the Doppler effect of such a motion would be zero, the solar and arc wave-lengths are equal. If the means for all lines be considered, the displacement at the center of the disk is zero and at the limb A toward the red. Within the limits of error there is accordingly no evidence in these observations of displacements in the direction of longer wave-lengths, either at center or at limb, of the order of the A required by the equivalence principle of relativity as developed by Einstein. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
